

# Introduction and Business Problem

- A customer, David, wants to open a new burger joint in Bogotá, Colombia.
- Due to Bogotá's high diversity and very large size, he asked me for help in order to find the best spot to place the burger joint.
- Bogotá has 20 different Localities (Districts) and we aim to find the best one.
- We need to choose a Locality that has good amount of customers and low amount of competition.

# Data

- To help David in his search we will need to access following data:
- The Localities of Bogotá, Colombia from Wikipedia:  
[https://es.wikipedia.org/wiki/Anexo:Localidades de Bogot%C3%A1](https://es.wikipedia.org/wiki/Anexo:Localidades_de_Bogot%C3%A1)
- The coordinates (latitude, longitude) of these Localities of Bogotá from Open Street Map APIs
- From Foursquare we will need following venues data:
  - the burger joint venues of the Localities
  - the offices venues of the Localities
  - the high schools venues of the Localities
  - the universities venues of the Localities
- We will then leverage the data in order to determine which locality is the most appropriate in order to locate the burger joint.

# Methodology

- For each locality, all office, school, university and burger joints venues data have been collected from Foursquare.
- Then for each locality, the sums of the office, school, university and burger joints were computed.
- For each of this 4 categories, a weight (or penalty) has been defined according to what David considers the most important.
  - Burger Joints have been weighted with -1, since Paolo wants to avoid concurrence.
  - Schools have been weighted with 1, since student are good customers.
  - Universities have been weighted with 1.5, since students are good customers.
  - Offices have been weighted with 2, since employees are even better customers.
- Note that the weights can be modified according to the importance of each category.
- Lastly, a score was computed for each locality as the weighted sum of the number of venues in each of the 4 categories (school, university, office, burger joints).

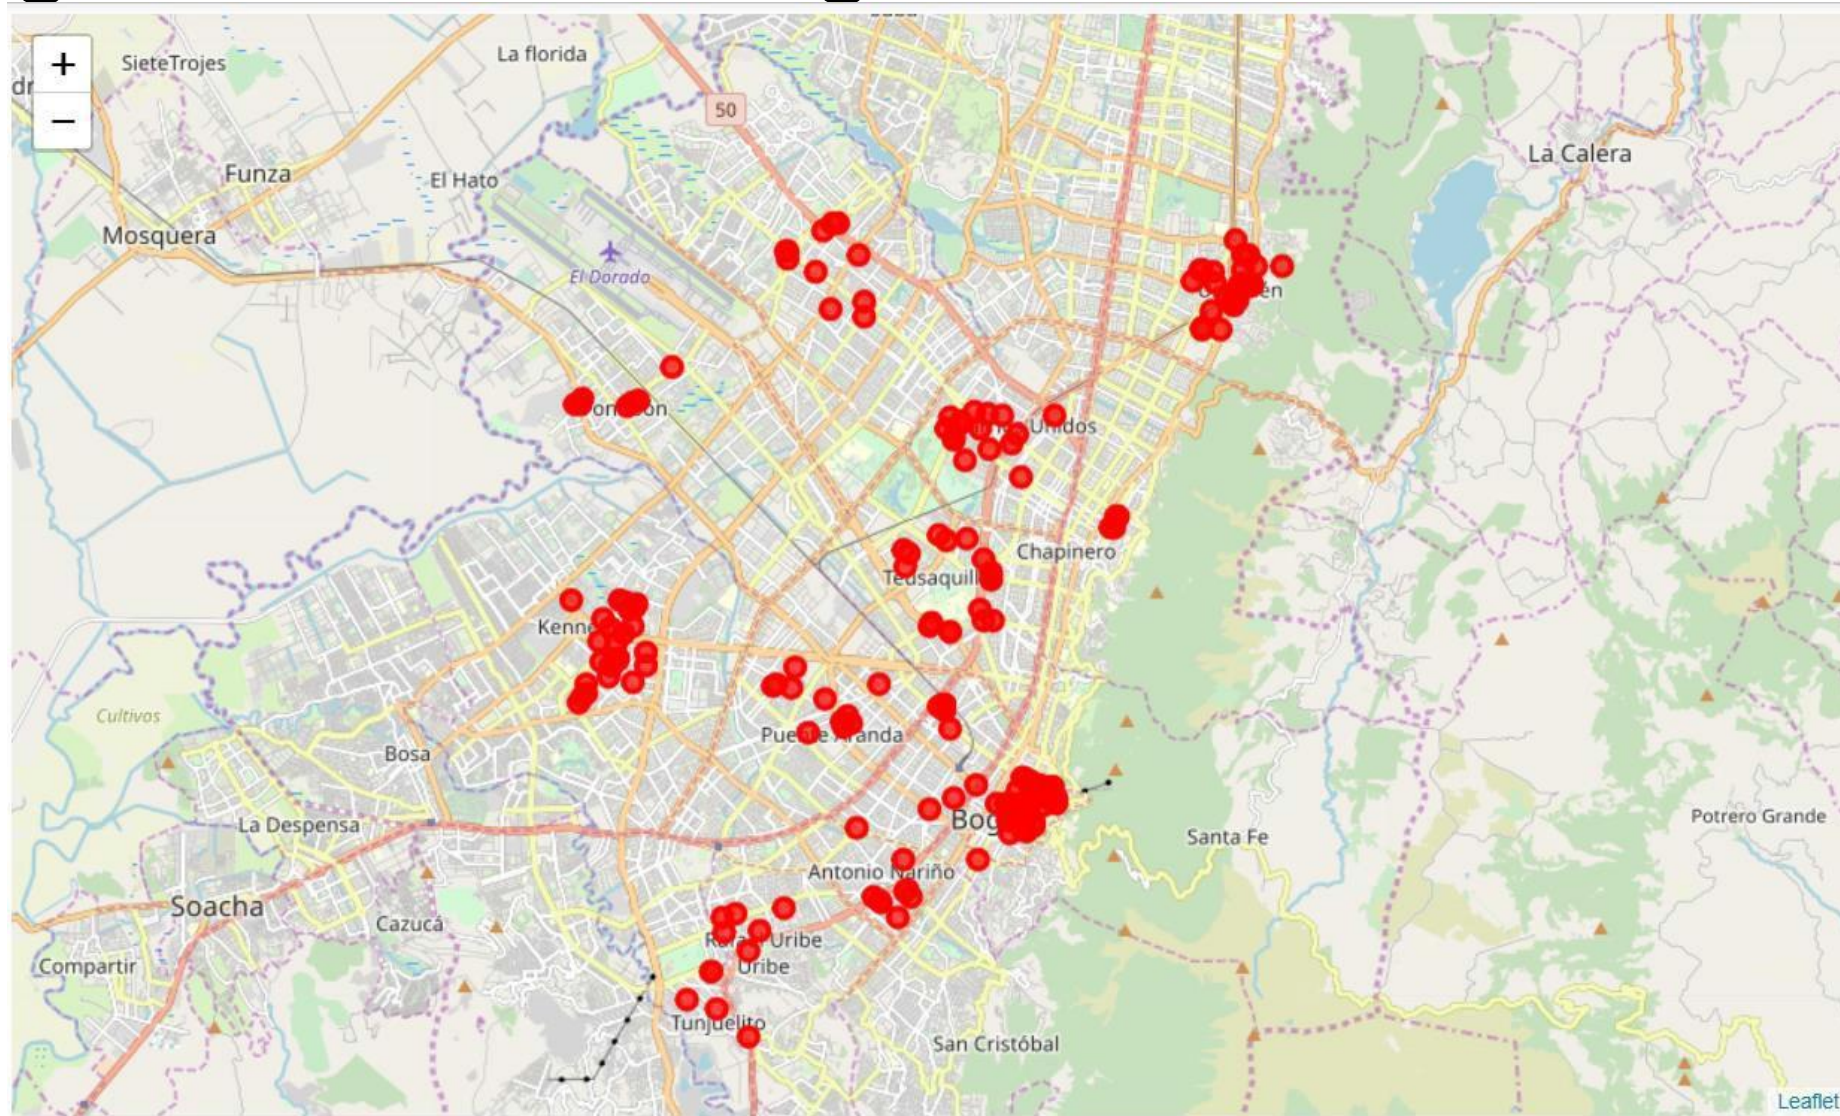

# Localities of Bogotá, Colombia

	Localidades	Latitude	Longitudo
0	Usaquén	4.695047	-74.031493

# Burger Joints in Bogotá Localities

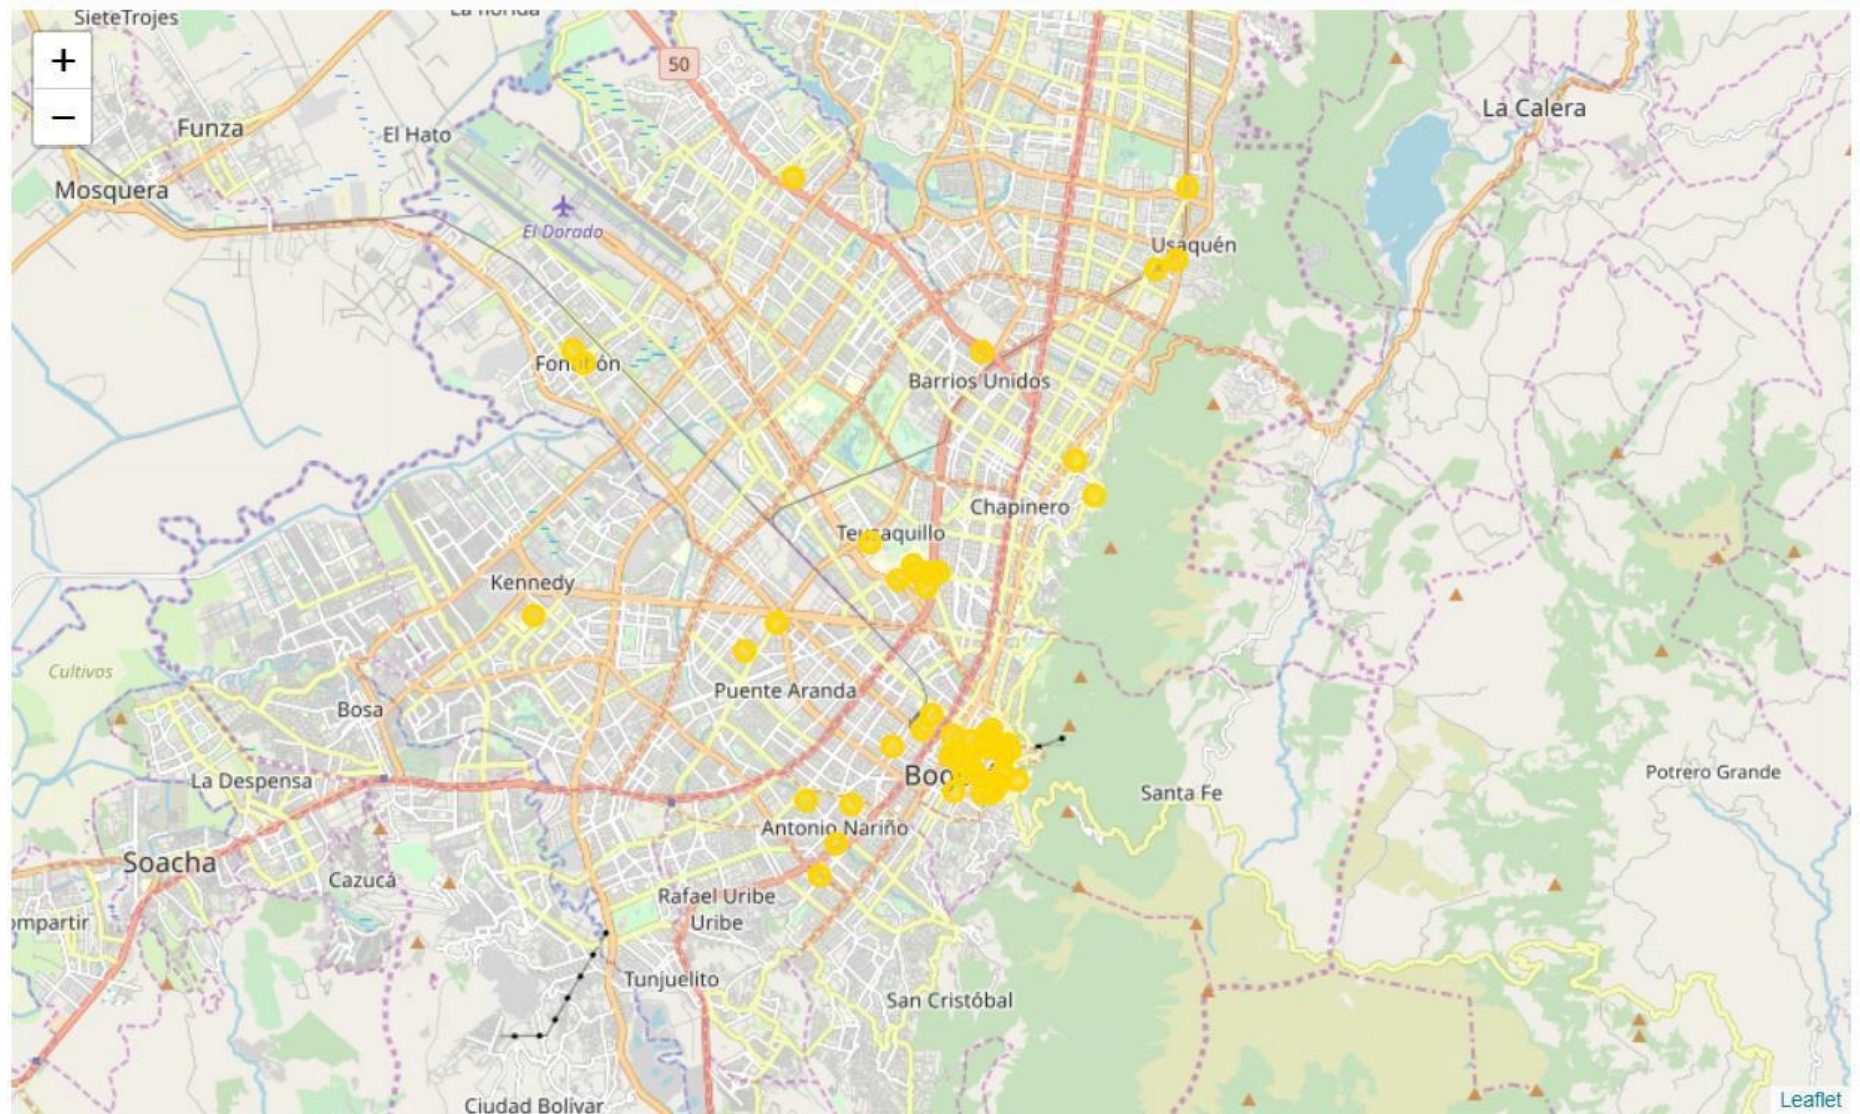

# High Schools in Bogotá Localities

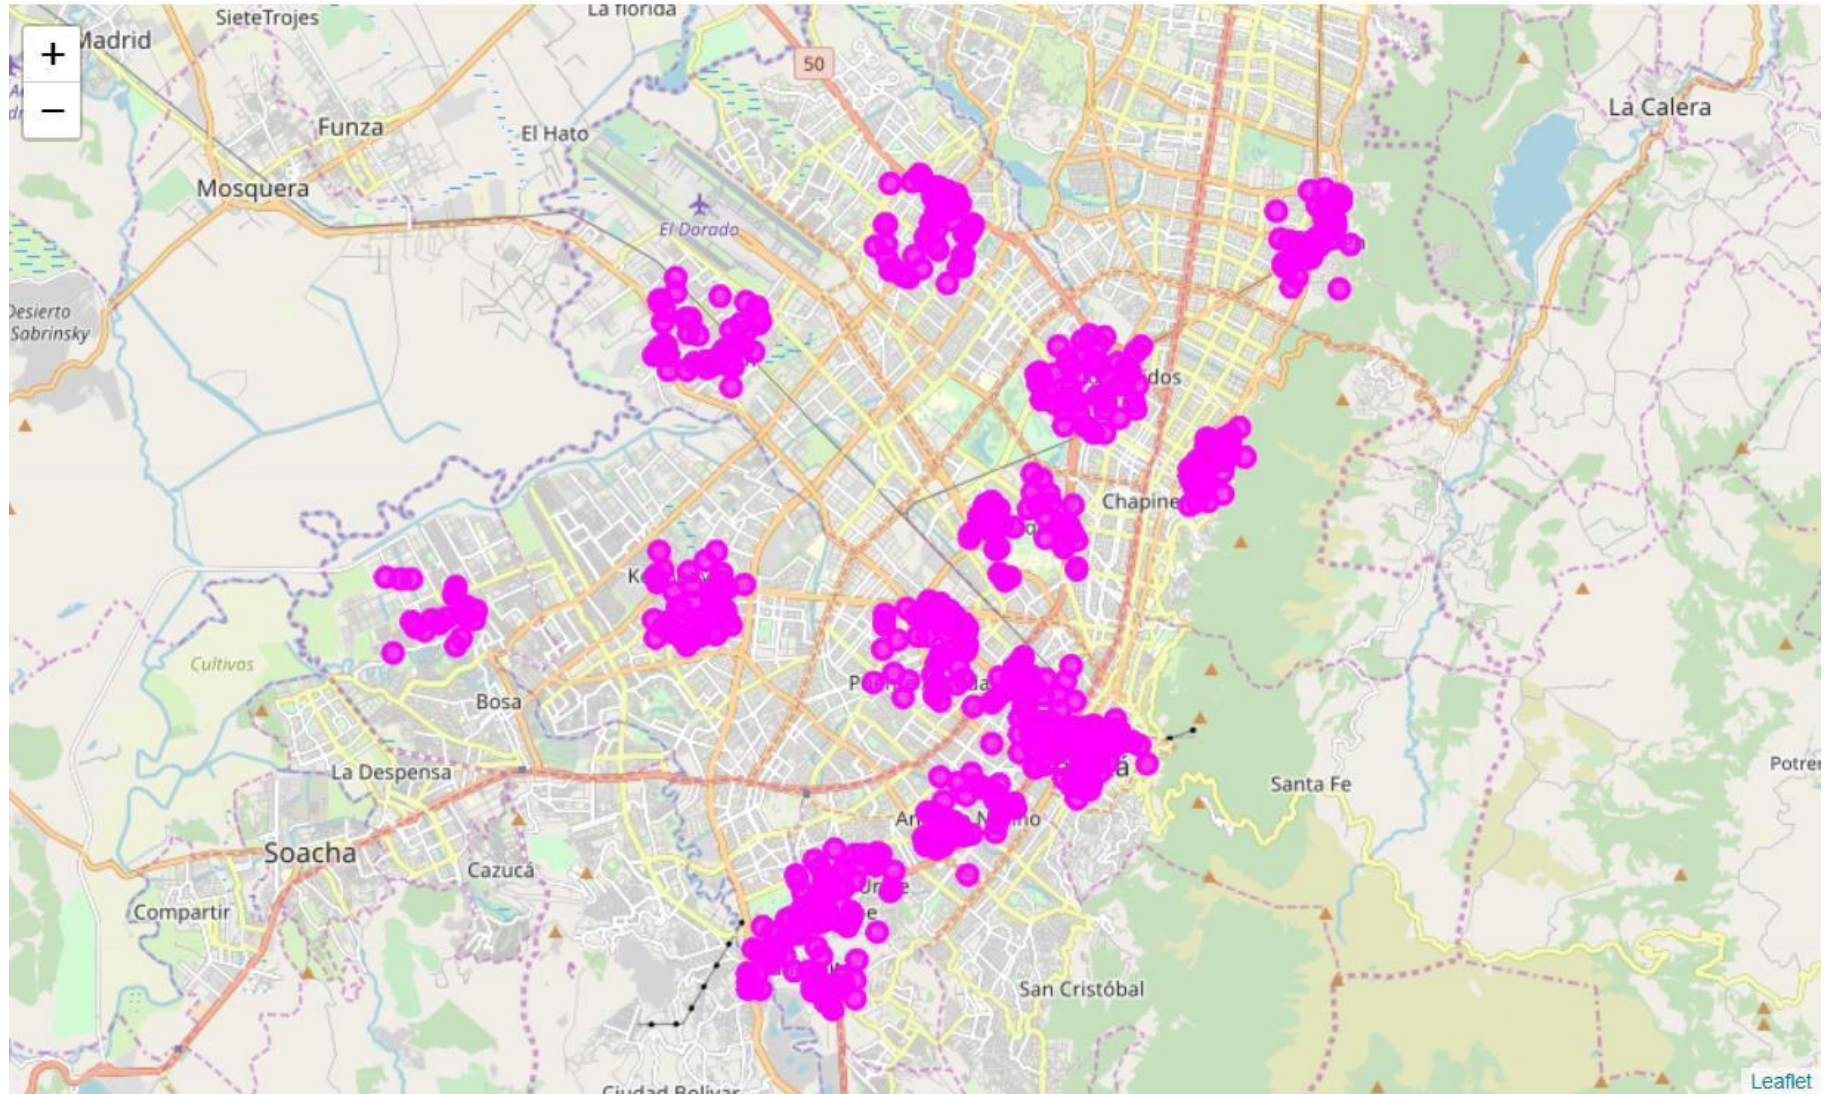

# Universities in Bogotá Localities

# Offices in Bogotá Localities

# Results

	Localidad	Score
16	La Candelaria	109.5
14	Antonio Nariño (Bogotá)	101.0
8	Fontibón	99.0
17	Rafael Uribe Uribe (Bogotá)	98.0
5	Tunjuelito	98.0
1	Chapinero	97.0
9	Engativá	94.5
12	Teusaquillo	94.0
13	Los Mártires	93.5
15	Puente Aranda	92.0
11	Barrios Unidos (Bogotá)	87.5
7	Kennedy (Bogotá)	75.5
0	Usaquén	74.5
10	Suba	54.0
6	Bosa (Bogotá)	49.0
4	Usme	0.0
3	San Cristóbal (Bogotá)	0.0
2	Santa Fe (Bogotá)	0.0
18	Ciudad Bolívar (Bogotá)	0.0
19	Sumapaz (Bogotá)	0.0

- The Locality with the best score is “La Candelaria” with 109.5, being the best option.
- Follows closely “Antonio Nariño” with 101.
- These options maximizes the number of potential customers from offices and universities and at the same time have not too large competence.

# Best Place for the Burger Joint in Bogotá is “La Candelaria”

# Recommendation

- The following analysis can be improved with following extensions:
  - Consider more categories. For example like "Night life" which is also a good source for customers. But also like "Restaurants", which even if not burger joints may be some concurrence if too many.
  - In the Locality itself, it can also be computed the distance between all the venues in order to find a place with the most number of potential customers.
  - Using smaller geographical areas like Neighborhoods could improve the accuracy for the scores.
